

» High Stakes Require High Performance

The development of anticancer drugs is more difficult and has a lower success rate than in other indications. You need a partner that has both deep and current experience executing projects in the fast-evolving and complex field of oncology. We deliver a complete range of clinical trial services and provide strategic consulting to companies developing cancer therapies.

Our proven center of excellence provides guidance and insight to optimize your clinical strategy, choice of endpoints based on the mode of action or tumor biomarkers, patient selection, feasibility studies, up-to-date trend analyses, and result reporting.

As a specialized clinical solutions company, primarily partnering with small to midsize biopharma, our experts excel at designing and executing oncology and hematology clinical trials, covering all development phases (I-IV), solid tumors and hemato-oncology indications, and a wide spectrum of drug modalities and therapeutics.

With these advanced therapies, marketing approval is critical, so we design and conduct each trial with your marketing approval or exit strategy in mind.

You know your team is bringing their best. From clinical study design to clinical trial management, medical writing, clinical data management, and more — you need a partner that does, too. You need CATO SMS.

Oncology Trials Require Oncology Experts: CATO SMS

Our proven center of excellence gives you insights and results from startup to completion. Working at the forefront of oncology, from full-service clinical trials to consulting projects, we offer substantial experience in:

- Anticancer vaccines
- Antibodies (monoclonal, bispecific, and ADCs)
- Other immunotherapies (immune stimulating peptides, checkpoint inhibitors such as PD-L1)
- Nanoparticle formulations
- Metabolic regulators
- Chemotherapies modified for enhanced efficacy
- Immunotherapies (DNA vaccines)
- Cell, gene, and tissue therapies (ATMPs)

Our specialty is Phase I/II trials, in which oncology know-how is key. These complex trials are monitored intensively by our oncology CRAs and managed by our experienced PMs. We also have substantial experience with late phase, pivotal, and postmarketing trials well as compassionate use/early access programs.

Proven Center of Excellence

- Wide range of clients, many returning for continued collaboration
- In-depth therapeutic knowledge and hands-on experience to meet your challenges and seize opportunities
- Awareness of current scientific and clinical developments supports you in transforming cancer care
- Clinical experience and market understanding to leverage the full potential of your oncology compound
- Global, collaborative oncology network of renowned, experienced, and well-motivated sites, investigators, and opinion leaders facilitates selection of the optimal countries and sites for your trial
- Intensive trial monitoring by dedicated oncology CRAs well versed in tumor-specific evaluation criteria and/or immune-related criteria such as RECIST 1.1, (i)RANO, irRC, iRECIST, and mRECIST.

Patients are relying on you to discover lifesaving treatments; you can rely on us to deliver the therapeutic, operational, and organizational insights your oncology trials need.

We know how important your product is to you and the patients who are waiting.
